SPFX SOLUTIONS

Client Analytics Web Parts
SPFx 1.22, Chart.js, React, Fluent UI

Charts and KPI callout tiles over SharePoint project data, surfacing the measures that drive project delivery and cost. About **570 documented test cases**, including 50,000-row stress tests.

Email Digest Configuration UI
SPFx, React, Azure Durable Functions, SendGrid

End-user settings page that saves per-site preferences for the coming-due and overdue task digest sent across 30+ tenants.

Extension and Web Part Suite
SPFx, PnPjs, Azure Artifacts

Top banner and maintenance alerts, support chat widget, bidding buttons, company type-ahead for forms and bookmarks, built on a shared npm utilities package published to Azure Artifacts.

SPFx Release Pipeline
Azure DevOps

Azure Pipelines with rollback that build and publish only the solutions that changed.

REACT PROJECTS

Webhook Admin Portal
React 19, TypeScript, Vite, Azure Static Web Apps, Entra ID

One screen to manage SharePoint webhooks and app settings across **30+ client tenants**, with webhooks routed through Event Grid to Azure Functions. Built the front end on an API from our senior architect and cut the main grid from **20+ API requests per load to zero**.

SPFx Front Ends
React, Fluent UI

The analytics web parts and digest settings page above are React components inside SPFx.

POWERSHELL PROJECTS

SharePoint Provisioning Framework
PowerShell 7, PnP.PowerShell, CSOM, Git

Builds tenants, portfolios and project sites from a gold-standard template, cutting site builds **from hours to minutes** across hundreds of sites. An auditor checks each build and emits an HTML compliance report. 60+ releases, 85+ shared functions, dev-to-production pull-request flow.

Support Script Library
PowerShell, Teams, Freshdesk

Hundreds of documented scripts the support team runs safely: a README per script, transcript logging, and failure alerts that post to Teams and open Freshdesk tickets.

PowerShell Function Apps
Azure Functions, Durable Functions, Microsoft Graph

8 apps with managed identity, Key Vault and Application Insights, including a nightly fan-out that checks every issuance library against the search index and repairs gaps.

Drawing Issuance (original)
PowerShell

The PowerShell process handling thousands of construction documents a day, later moved to Azure Durable Functions.

PLATFORM UNDERNEATH

- **Azure:** Durable Functions (drawing issuance for the largest client, task digests across 30+ tenants), Static Web Apps, Event Grid, Key Vault, Log Analytics.
- **Delivery:** Azure Pipelines with rollback for SPFx and .NET, tens of releases a month; AI-driven QA pass that caught a high-severity defect manual testing missed.
- **Team:** led AI adoption with Claude, ChatGPT and Cursor across 5 developers; ran QA and Agile Scrum planning in Azure DevOps.
